

Combining modern steel technologies with a long-standing tradition in forging and craftsmanship, CP Industries manufactures seamless pressure vessels that provide proficient means of containing compressed gases for use in oil and gas exploration as well as production. These vessels comply with DOT, ISO and ASME specifications for storage of gases such as nitrogen, air and heliox mixtures. Typical applications include large air pressure vessel systems for deep water offshore platforms and motion compensation systems on drill ships.

Additionally, we manufacture breathing air cylinders for use in diving operations as well as emergency evacuation situations for diving operations. All of our vessels are approved by our third-party inspection agency partners. At CP Industries, we bring to our customers decades of industry knowledge and a level of reliability, expertise and service with an eye toward safety and economy that is without equal in our field.

- Designed and customized specifically to meet customer needs
- Special internal cleaning is available
- Available in single vessels or as complete assemblies
- Third-party inspection agencies Lloyd's, DNV and ABS
- Custom paint systems are available per customer specifications

*A worldwide supplier of superior products and exceptional customer service, since 1897*
